# What is a Removable Seat Deck?

Seat decks that are manufactured to be easily lifted out of the frame for quick removal and simple clean up.

Seat suspension under cushion includes a spring unit for seating comfort and extends the life of the seat cushion.

Stainless steel staples prevent rust.

Seat deck is finished in moisture resistant vinyl for easy clean up.

All internal exposed wood surfaces are sealed for moisture resistance and cleanability.

Loose Seat

Tight Seat

Also available in tight seat styles.  
Seat cushion and deck lift out as a complete unit.

## Heavy Incontinence or Fluid Issues?

From a harmless beverage spill to incontinence, upholstery clean ups can be stressful. Upholstered furniture groups tend to play center stage in a facility's common area. Visible stains can be a real distraction for clients, visitors and staff.

Furniture Concepts offers removable seat decks for easy clean up. The upholstery remains relatively fluid free and only a minor fabric clean up may be required. The foam inside the cushion is typically not affected from most fluid spills so both the upholstery and core are protected.

# What Makes These Recliners Heavy Duty?

A typical retail quality recliner might seem like a reasonable solution for patient and client demands for recliners, but what's "under the hood" makes all the difference.

SO WHAT IS THE DIFFERENCE?

**A heavy duty recliner has four major enhancements that set it apart from retail counterparts:**

1. The recliner mechanism, which is most susceptible to damage, is made of heavy-gauge steel. Recliner mechanisms are extremely prone to bending or warping due to repeated use. We recommend power mechanisms for anyone other than high functioning residents.
2. The wood frame underneath the upholstery and foam is constructed of thick, strong wood species. Frames are covered in catalyzed lacquer to ensure that moisture and fluids do not cause frame warping and damage.
3. Contract recliners also offer higher density foam filling in the seat cushion. This not only increases the longevity of the recliner, but also aids patients and consumers with limited mobility to get from sit to stand. The higher density foam offers more stability, since the patient does not sink as far into the cushion.
4. Upholstery choices like fluid proof and fluid resistant fabrics make buying a contract grade recliner a far better value than a less expensive retail recliner. Retail versions don't offer the durability of a contract grade heavy duty recliner.
